The aperture in this picture, along with the angle made the image really stand out. This looks really cool and is a really nice still life. Nice work!

This picture is really boring, but you made it stand out by taking it from a side angle and making sure the quality was crisp.

I love how you made this still life black and white because it made the photo look rustic and old. This looks really cool because the image itself is really well set up and clear. I also love the tilted camera angle!

I love the composition with this photo. The bright colors look nice, but sort of take away from the part of the plane that is supposed to be the main subject of the image. Still a really nice pic.
